## EDUCATION

|                                                                                                                                |                                       |
|--------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|
| <b>Mar Baselios College of Engineering and Technology</b><br><i>Bachelor of Technology in Computer Science and Engineering</i> | Nalanchira, Trivandrum<br>2021 – 2025 |
| <b>The School of the Good Shepherd</b><br><i>CBSE — 12th Standard</i>                                                          | Akkulam, Trivandrum<br>2020 – 2021    |
| <b>The School of the Good Shepherd</b><br><i>CBSE — 10th Standard</i>                                                          | Akkulam, Trivandrum<br>2018 – 2019    |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| <b>Associate Software Engineer</b><br><i>Quadance Technologies</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | October 2025 – Present<br><i>Technopark Phase 1, Trivandrum</i> |
| <ul style="list-style-type: none"><li>Developed OCR extraction workflows to process unstructured documents and convert them into structured datasets for analysis.</li><li>Conducted data cleaning, transformation, and preprocessing using Pandas, supporting downstream machine learning tasks.</li><li>Trained a custom YOLO-based object detection model on domain-specific datasets, optimizing accuracy and inference speed.</li><li>Built responsive and user-friendly frontend applications using React and Tailwind CSS while collaborating closely with UI/UX designers.</li></ul>                                                       |                                                                 |
| <b>Software Developer Intern</b><br><i>Nissan Digital India LLP</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | July 2024 – March 2025<br><i>Technopark Phase 3, Trivandrum</i> |
| <ul style="list-style-type: none"><li>Designed and developed modular Spring Boot components to simulate end-to-end business workflows, improving maintainability and logical separation of services.</li><li>Integrated Jenkins with Bitbucket to streamline code execution, supporting continuous integration workflows.</li><li>Collaborated on code reviews and knowledge-sharing sessions, ensuring adherence to best practices and clean coding standards.</li><li>Actively participated in Agile ceremonies (Scrum) including sprint planning, daily standups, and retrospectives, using JIRA and Confluence for project tracking.</li></ul> |                                                                 |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Conversation AI Chatbot using RAG Architecture</b>   <i>Python, Langchain, Streamlit, ChromaDB</i>                                                                                                                                                                                                                                                                                       |
| <ul style="list-style-type: none"><li>Designed and built a Retrieval-Augmented Generation (RAG) pipeline using LangChain and ChromaDB.</li><li>Implemented embedding generation, vector search, and context-aware retrieval for high-quality responses.</li></ul>                                                                                                                           |
| <b>Network Intrusion Detection and Prevention System</b>   <i>NumPy, Pandas, Seaborn, Scikit Learn</i>                                                                                                                                                                                                                                                                                      |
| <ul style="list-style-type: none"><li>Conducted data preprocessing, feature engineering, and model comparison using Random Forest, SVM, KMeans, and DBSCAN.</li><li>Evaluated models using precision, recall, and confusion matrix, improving threat classification accuracy.</li><li>Visualized network patterns and anomaly clusters using Seaborn to support interpretability.</li></ul> |
| <b>Real Time Emotion Detection</b>   <i>NumPy, TensorFlow, cv2, Keras</i>                                                                                                                                                                                                                                                                                                                   |
| <ul style="list-style-type: none"><li>Trained multiple deep learning architectures (ResNet50, VGG19, InceptionV3) for image-based emotion classification.</li><li>Implemented a live prediction pipeline using OpenCV and TensorFlow.</li></ul>                                                                                                                                             |

## TECHNICAL SKILLS

**Languages:** Python, SQL, Java, C  
**Databases:** PostgreSQL, MySQL, Pinecone, ChromaDB, Weaviate  
**Data Engineering / ML Tools:** Pandas, NumPy, Scikit-Learn, TensorFlow, Keras  
**Cloud Platforms:** AWS  
**Frameworks:** LangChain, LangGraph, Streamlit  
**Developer Tools:** Git, PyCharm, VS Code, IntelliJ, JIRA  
**Concepts:** RAG, Data Pipelines, ETL, Transformers, CNNs, Model Evaluation
